Naloxone reversing an overdose

Naloxone has a stronger affinity to the opioid receptors than opioids, such as heroin or oxycodone, so it knocks the opioids off the receptors for a short time (30-90 minutes). This allows the person to breathe again and reverse the overdose.

Fentanyl Crisis: Ohio Cop Accidentally Overdoses During Drug Call

by CORKY SIEMASZKO

An Ohio police officer was "still miserable" but recovering Monday after he accidentally overdosed on a dangerous drug that has cut a deadly swath through his state — fentanyl.

Patrolman Chris Green of the East Liverpool Police Department had just finished searching the car of two suspected drug dealers and was back at the police station when another officer spotted some white powder on his shirt.

The car of suspected drug dealers Justin Buckle and Cortez Collins. East Liverpool Police

Without thinking, he brushed it off with his bare hand — and passed out about an hour later, Chief John Lane said. It took four doses of Narcan to revive him.

"This happened on Friday, but he's still got a headache, his chest hurts, he's lying on the couch," Lane told NBC News. "He's still miserable."
